

Module Three

Task: Draw a simple object using a light source

Adding shade and shadow to your illustrations fills out the subject and gives the illustration a third dimension.

By arranging a light source and throwing a shadow, a simple object can become a dramatic masterpiece! Refer back to your greyscale for contrast guidance and follow the video to see how to use the light source in a simple and effective way.

Keep using your greyscale as a guide. Notice the darkest, lightest, middle grey areas, and highlights.
